

NEWARK COLLEGE OF ENGINEERING

SYLLABUS AND COURSE INFORMATION

- Course Name:** Computerized Industrial Controls
- Course Number:** ECET 350
- Course Structure:** 2-2-3 (lecture hr/wk – lab hr/wk – course credits)
- Course Description:** This course introduces students to the theory and application of computerized control systems and technologies used in industry today. The course focuses on the hands-on development and integration of programmable logic controllers (PLCs), motor controllers (drives), and supervisory software.
- Prerequisites:** (ECET 211 or CPT 315) and ECET 311 and Junior or Senior Standing
- Corequisites:** None
- Required, Elective, or Selected Elective:** Elective
- Required Materials:** **Text:** Name: Programmable Logic Controllers
Author: James A. Rehg and Glenn J. Sartori
Year: 2008
ISBN: 978-0-13-504881-8
- Course Outcomes:** By the end of the course students are able to:
1. Understand and read basic ladder logic diagrams and relate such to basic digital logic symbols and state diagrams.
 2. Develop, program, implement and test ladder logic programs in industrial applications.
 3. Understand basic motor control and automation theory, including both digital and analog applications
 4. Convert ladder logic to its Boolean equivalent and use Boolean techniques to simplify and analyze complex ladder logic programs
 5. Understand the use and application of specialized PLC functions such as counters, timers, specialized relays, high speed counters, latches and arithmetic functions.
 6. Demonstrate the ability to create structured programs utilizing conventional methods of labeling, describing and documenting programs.
 7. Analyze, design and configure PLC programs to run rudimentary automation applications.
 8. Understand the operation the various file types and practice using each in program development.
 9. Understand the concepts of memory allocation, memory addressing and memory access in a PLC system.
 10. Differentiate between and design programs that minimize memory or scan times.

NEWARK COLLEGE OF ENGINEERING

11. Calculate theoretical scan times and understand their effect on system operation.
12. Understand the various hardware configurations and troubleshoot both hardware and software in a simulated industrial environment.

Class Topics: Ladder Logic Motor Control
Automation Theory Counters & Timers
PLCs Troubleshooting
Relays Sensors

Academic Integrity: Academic Integrity is the cornerstone of higher education and is central to the ideals of this course and the university. Cheating is strictly prohibited and devalues the degree that you are working on. As a member of the NJIT community, it is your responsibility to protect your educational investment by knowing and following the academic code of integrity policy that is found at:
<http://www5.njit.edu/policies/sites/policies/files/academic-integrity-code.pdf>

Please note that it is my professional obligation and responsibility to report any academic misconduct to the Dean of Students Office. Any student found in violation of the code by cheating, plagiarizing or using any online software inappropriately will result in disciplinary action. This may include a failing grade of F, and/or suspension or dismissal from the university. If you have any questions about the code of Academic Integrity, please contact the Dean of Students Office at dos@njit.edu

Modification to Course: The Course Outline may be modified at the discretion of the instructor or in the event of extenuating circumstances. Students will be notified in class of any changes to the Course Outline.
